Summary

A skilled software engineer with three years of experience developing scalable backend systems, mobile applications, and infrastructure solutions. Strong expertise in building REST APIs, system automation, cloud technologies, and implementing CI/CD pipelines. Proficient in backend development with FastAPI, system-level programming, and cloud platforms, including AWS. Experience with containerization, build automation, and infrastructure tooling. Passionate about system reliability and performance optimization.

Experience

Software Developer, Huawei – Istanbul, Türkiye 17/03/2025 – Current

- Building scalable and efficient REST APIs with FastAPI for production-grade applications.
- Developing smartwatch and cross-platform applications using TS in the HarmonyOS environment.
- Automated 600+ test cases for user interface testing on OpenHarmony OS (Hypium, TestKit) to ensure component stability, layout accuracy, and performance.
- Implemented CI/CD pipeline structure using Jenkins to automate build and deployment processes fully.
- Building internal tools for structured log analysis and debugging (touch events, system performance).
- Contributing to developer documentation, community forums, and example implementations based on reported issues for HarmonyOS and OpenHarmony.

Flutter Developer, Mobilist Bilişim – Istanbul, Türkiye 01/11/2023 – 14/03/2025

- Developed and maintained Flutter applications on the Web, Android, and IOS platforms.
- Led an e-commerce application into production (Kerim Çelik).
- Maintained multiple applications and resolved bugs, applied clean architecture and SOLID principles.
- Participated in building Parakolay SDK and implementation within the Parakolay apps.
- Attended AWS Cloud professional development courses.

Projects: Parakolay, Parakolay Merchant, Kerim Çelik, Velox, Amber.

Technologies: Dart, Flutter, Bloc, Riverpod, Git, dio, REST, Hive, Auto Route, Deep Link, AWS.

Android Developer, Intertech – Istanbul, Türkiye 26/09/2022 – 01/08/2023

- Developed and maintained legacy code features.
- Led the migration from Android 13 to Android 14.
- Resolved bugs and translated designs into quality code.
- Reconstructed the state management of an internal application, transitioning from the GetX package to the Bloc package.

Project: Mobil Deniz Android.

Technologies: Android Native, Kotlin, Java, Dart, Flutter, GetX, Bloc.

Blockchain Developer Intern, Intertech – Istanbul, Türkiye 08/08/2022 – 09/09/2023

- Created a smart contract for a money-saving application.
- Led the migration from Android 13 to Android 14.
- Wrote unit tests with Hardhat and Truffle packages.
- Developed features and participated in team meetings of companies Flutter team.

Projects: Radar, FiTech.

Technologies: Solidity, TypeScript, Hardhat, Truffle, EthereumJS, Dart, Flutter, GetX, Bloc.

Android Developer Intern, Mobven – Istanbul, Türkiye

03/01/2022 – 04/02/2022

- Developed an Android Native application with Kotlin.
- Translated designs into quality code.
- Adapted the latest Android development techniques to create the UIs.
- Participated in code review sessions with the Android team.

Technologies: Kotlin, Jetpack Compose, Hardhat, Truffle, EthereumJS, Dart, Flutter, GetX, Bloc.

Education

Bahcesehir University, BS in Computer Engineering

Sept 2019 – July 2023

Capstone: Controlling micro-swimmers in a magnetic field by utilizing the forces generated by the magnetic field, with reinforcement learning algorithms to optimize movement, implemented via an Arduino platform.

Projects: Field Tiredness Map (C++), Smashing Four Game (C++)

Skills

Mobile Development: Kotlin/Android Native, Dart/Flutter, React Native

Back-end Development: Python, NodeJS.

Cloud: AWS, Code Build.

CI/CD: CodeMagic, Jenkins

Languages: English (C1) IELTS: 7.5

Certificates

- Neural Networks and Deep Learning, Coursera.
- Divide and Conquer, Sorting and Searching, and Randomized Algorithms (Stanford University, Coursera).
- CS50P Introduction to Python (2022).
